

# Appio Multifunctional Center

## Proposal for a retail center

Rome

Size: 36.500 sqm

Feasibility study: 2004

Project undertaken as AUKETT + GARRETTI S.r.l.

Aukett+Garretti was invited to develop a feasibility study for a mixed use retail centre, including a shopping centre, a local food and flower market, a gym and office spaces for the municipality. The centre, enclosed within existing listed buildings, which will also be refurbished, opens up toward the main street through an open piazza covered by a tensile structure which shades the square during hot hours. The square is thought to function also as an open theatre or an exhibition space for entertaining events, as well as a route to an exclusive trip to experiment new gastronomy located in the premises of the existing building.
